Undergraduate training of family doctors

At the undergraduate level the physicians are trained by the Tajik State Medical University, in accordance with a multilevel system where the two-year Master of Medicine program represents the highest level

Postgraduate training of family physicians in Tajikistan

Integration of training programs aimed at perfecting practical skills
and improving qualifications of trainees in the field of family medicine

Coordination of training of family medicine specialists

Ministry of Health of the Republic of Tajikistan		Successful integration of the educational efforts and programs of the Tajik Institute of Postgraduate Studies for Medical Staff and Republican Family Medicine Training Center
	Achievements of coordination →	Adequate programs and modules for training family physicians have been created
		These programs have integrated the best works of healthcare experts within the country, experts from WHO, the World Bank, and AIHA Partners from the city of Boulder
